### Tripping characteristics

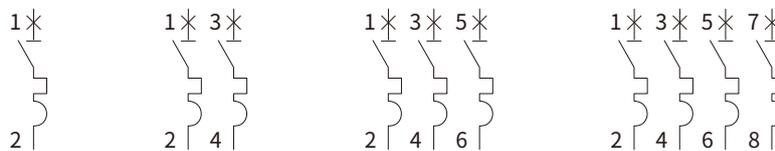

Based on the Tripping Characteristics, MCB are available in “B”, “C” and “D” curve to suit different types of applications.

“B” Curve for protection of electrical circuits with equipment that does not cause surge current (lighting and distribution circuits) Short circuit release is set to (3-5)In.

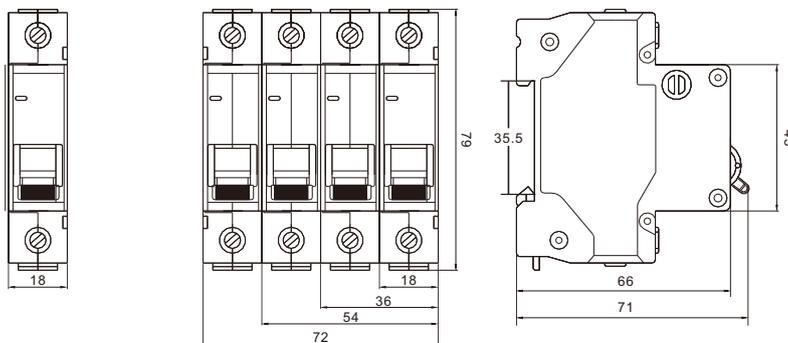

“C” Curve for protection of electrical circuits with equipment that cause surge current (inductive loads and motor circuits) Short circuit release is set to (5-10)In.

“D” Curve for protection of electrical circuits with cause high inrush current, typically 12-15 times the thermal rated current (transformes, x-ray machines etc,) Short circuit release is set to (10-20)In.

### Impulse Relays

The impulse relays are used to control, by means of pushbuttons, lighting circuits consisting of:

- Incandescent lamps, low-voltage halogen lamps, etc. (resistive loads)
- Fluorescent lamps, discharge lamps, etc. (inductive loads)

### Impulse Relays Are Used

- Closing of the impulse relay pole(s) is triggered by an impulse on the coil.
- Having two stable mechanical positions, the pole(s) will be opened by the next impulse. Each impulse received by the coil reverses the position of the pole(s).
- Can be controlled by an unlimited number of pushbuttons.
- Zero energy consumption.

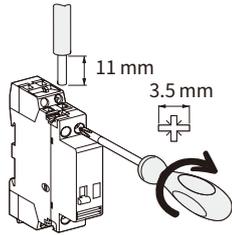

### Yellow Clip

- A simple clip-on system for flexible auxiliaries combination and improved robustness
- For electrical and mechanical connections
- Insulated terminals IP20
- Built-in or optional auxiliary function: state indication, centralised control, latched control, control for illuminated pushbutton, step-by-step control, time delay
- Manual controls on front face: direct and priority manual control by O-I toggle
- Mechanical contact position indicator
- Disconnection of remote control by selector switch (except for 4P single-piece EKLR16) for maintenance operation

### Product Overview

EKM8E series electronic circuit breakers are applicable for low-voltage power systems of AC 50Hz, rated operating voltage up to 1000V and rated operating current from 16A to 1250A.

#### Ambient and installation conditions

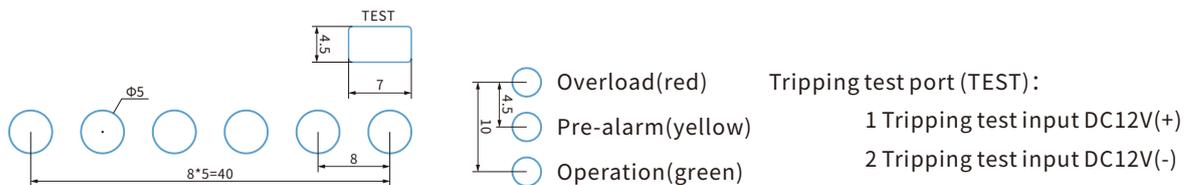

- Altitude up to 2000m;
- Ambient medium temperature should be within -10°C to +55°C ;
- It can withstand the effect of damp air;
- It can withstand the effect of salt fog or oil mist;
- It can withstand the effect of moulds;
- It can withstand the effect of nuclear radiation;
- The max inclination is 22.5°C.
- It still can work reliably when the ship subjects to normal vibration;
- It can still work reliably if the product subjects to the earthquake (4g).
- Places where the surrounding medium is free from explosion danger, and far away from gas or conductive dust that would erode the metal or destroy the insulation;
- Keep away from rain or snow.

### Product Features

- Circuit breaker can be equipped with undervoltage release, shunt release, auxiliary contacts, alarm contacts, electric operating mechanism, rotary operating handle and other accessories.
- Circuit breaker has protection functions of overload long delay, short-circuit short delay and short-circuit instantaneous protection, the user can set the required protection characteristics (user only needs to operate the DIP switch for settings of protection function parameters).
- Circuit breaker has ground fault and thermal analog protection functions, pre-alarm indication over-current indication, load current indication, digital current analysis technology, and it can achieve a higher level of protection.

### Panel and function description

Intelligent release panel

Panel adjustment knob as follows in turn:

- IR(A) I<sub>sd</sub>(x IR) I<sub>i</sub>(x IR)
- IR: Overload long delay tripping setting current; I<sub>sd</sub>: Short-circuit short delay tripping setting current;
- I<sub>i</sub>: Short-circuit instantaneous tripping setting current;

The rest parameters are set by factory default, or set by remote communication, as follows:

- t<sub>R</sub>: Overload long delay setting time, factory default: 60s;
- t<sub>sd</sub>: Short-circuit short delay setting time, factory default: 0.1s;
- I<sub>p</sub>: Overload pre-alarm setting current, factory default: 0.85\*IR;

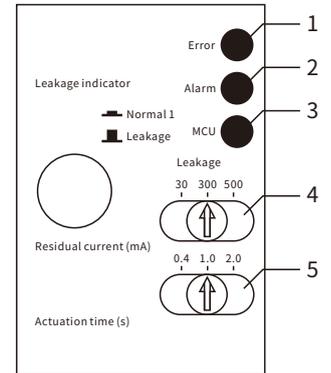

Intelligent communication port (COM):

### Panel With Residual Current Protection

- 1: Setting current  $I_n$  overload indicator, the red light will go on when the operation current is  $\geq 105\% I_n$
- 2: Pre-alarm current  $I_p$  indicator, the yellow light starts flashing when operation current is  $\geq I_p \times 90\%$
- 3: When operation current is  $\geq 60\% x I_n$  setting current, the green light will go on
- 4: The code switch for residual current setting
- 5: The code switch for leakage action time setting
